

80% of boats that sink, sink at the dock

Vessel sinking is the largest recreational boat loss in the United States. For every boat that sinks while underway four boats sink at the dock in their slips. Don't let your boat be a statistic. The Magellan's wireless high water sensor and wireless low voltage sensor can notify you in time to help prevent this from happening.

Key Features:

- Theft Prevention
- High Water Alarm
- Smoke Alarm
- Low Voltage Alarm
- Shore Power loss notification
- Remote control operation
- Insurance premium discounts

MAGELLAN™

WIRELESS BOAT SECURITY & MONITORING SYSTEM WITH VOICE REPORTING

Protect your boat

Voice Reporting

“M/V Island Time: high water alarm...”

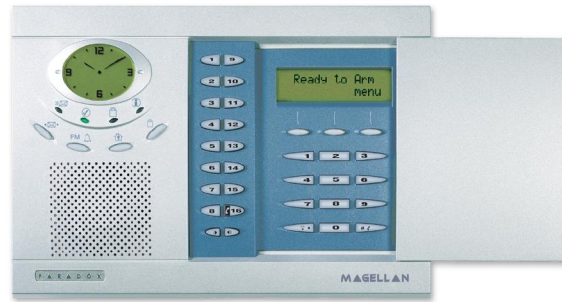

Magellan can call you or someone you designate at two different telephone numbers. It will play a personalized voice message to announce that an alarm has occurred, *“loss of A/C power”* or *“high water alarm.”* When you receive a voice message, you can press a button on your phone to communicate with the head unit or a person on board through Magellan’s hands-free speakerphone.

Consumer Features

- Hands-free telephone
- High-quality voice and sound
- Remote control operation
- Access system features by phone
- Step-by-step guidance
- Alarm clock
- Vessel automation
- Chiming
- Built-in FM radio

All-in-one wireless security system

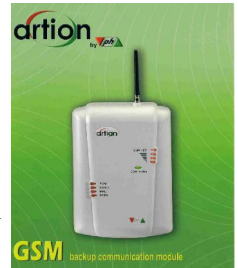

The Magellan is an All-In-One wireless security system that combines high security and monitoring applications on your vessel, ease of use and unique consumer features with a designer look you would never associate with security. What makes the Magellan unit so unique is its wireless sensing capabilities. Most boat security systems have their sensing devices hardwired to a central unit which is time consuming and expensive to install. This is a lengthy process that requires dismantling your boats decor to run wires to various exposed areas throughout your vessel, thus increasing labor costs and wear and tear. There in lies the beauty of the Magellan Security System. Imagine personalized, reliable and individually voice labeled wireless sensors monitoring intrusion, high water, AC power loss, low batteries and more. Should any of the wireless sensors be triggered it will call you and play a personalized pre-recorded voice message of the event.

The Magellan is the first security and monitoring system for your boat to combine security with popular consumer features, stylish design and inexpensive installation.

GSM Cellular Communications

The Artion GSM Cellular communication device allows the Magellan to call you and inform you of an alarm. The Artion also allows you to call the Magellan, arm/disarm, and speak to someone on board your vessel through the built in hands-free speaker phone. In addition, the Artion allows you to turn on/off lights and accessories.

Satellite Phone Communication

Vessels equipped with a Satellite phone can interface with the Magellan. This will provide all the same enhanced communication features as the Artion without the need for additional hardware.

Reputed Security

- Built-in transceiver
- Hands-free, two-way communication with monitoring station for emergency assistance
- Monitoring station pager and voice reporting
- One-touch emergency keys for immediate police, fire and medical assistance
- Full, force, stay, instant and automatic arming methods
- 16 wireless zones
- 16 users and remote controls
- 256 events buffered
